

Towards a Sustainable Supply Chain

To grow the company's environmental and social value over time and to create a valuable relationship with our suppliers, we have introduced **sustainability checkpoints** and **indicators** at all stages of the supply chain process

The environmental impact of our supply chain

At TIM, CO2 emissions related to the supply chain (Scope 3), and in particular to the procurement of goods and services, account for about **65%** of the company's total emissions.

Sustainable supply chain policies

Lowering environmental impact
by purchasing more sustainable

Choosing ESG suppliers
to be competitive in tenders and innovative in the solutions we offer to customers

Adopting circular economy models
to refurbish, recycle and dispose of materials and products

ESG control elements in our supply chain
